IWI –

ISRAEL WEAPON INDUSTRIES LTD.

The X95 - One rifle – three calibers suitable for all combat scenarios

The X95 is an innovate firearm which was created and developed in collaboration with the Elite Units of Israel Defense Forces (IDF). It was designed exclusively for the military, police, special forces and law enforcement. Every ergonomic aspect was taken into consideration during its development .

The X95 is manufactured out of high strength impact modified polymer, providing a strong but light weapon.Also incorporates advanced technology that allows the conversion among the different calibers within minutes. This leap in technology enables the soldier to use the same weapon platform for a wide array of scenarios .

The compatibility with different ammunition calibers is an attribute that saves training time, spare parts, and reduces overall costs.

The X95 - all in one mission - is the ideal weapon for handling complex situations and was created to deal with modern terror threats, as well as urban and open areas combat.

Exceptionally reliable in even the harshest weather conditions and combat-proven by military and police entities around the world, it is the standard Israel Defense Forces (IDF) assault rifle and complies with the most stringent NATO standards for small arms, including environmental standards.

UZI PRO SMG

The UZI sub-machine gun (SMG) was first introduced during the 1950s and was placed in service by the IDF in 1956. Due to its manageable and advantageous compact size, reliability and firepower, the UZI was immediately incorporated as a frontline weapon used by the IDF elite forces. The UZI is one of the world's most iconic weapons and its popularity continues even today. Over 2 million units have been sold worldwide.

The Mini and Micro UZI versions were very popular and were developed for special units, law enforcement agencies, and special police entities specializing in Close Quarters Battle (CQB).

The UZI PRO is the latest evolution featuring the most advanced firearms technologies. It is a major step forward for the UZI family in terms of the benefits gained from modern materials and design concepts in which modern polymers, MIL-STD 1913 (Picatinny) rails, an ergonomic shoulder stock, and a foldable hand grip were incorporated to obtain an up-to-date SMG.

The weapon was originated based on the user experience of the Israeli Special Forces and has been redesigned to be lighter, more accurate, more reliable but still concealable.

All of these have been accomplished without compromising the functionality and reliability associated with the famous and legendary UZI. Since its first development the UZI continues to uphold the technological standards of the 21st century.

TAVOR

The dynamic changes in the battlefield, threats of global terrorism and demanding combat situations, generated a necessity for a versatile, innovative and technologically advanced weapon.

With the complexity and diversity of defense and security challenges accelerating at an unprecedented rate, IWI set out to design, test and prove the ultimate assault rifle.

The TAVOR Assault Rifle was created to answer these adversities.

The TAVOR Assault Rifle was developed in close cooperation with Israel Defense Forces (IDF) and today all IDF Infantry Units and Special Forces deploy the TAVOR as their primary assault rifle. The TAVOR line of Assault Rifles is also operated by Governmental entities and Military and Police units, around the world.

The TAVOR was rigorously tested by the IDF on all terrains and performed flawlessly demonstrating that with its superior precision, accuracy, reliability and enhanced human ergonomics, the TAVOR distinguish itself as the ultimate weapon of the 21st century.

In 2014 the TAVOR Assault Rifle was selected by American Rifleman Magazine for the prestigious Golden Bullseye Award as the Rifle of the Year. This award is a symbol of excellence and innovation in firearms.

Stand Alone IWI GL 40mm

Your Partner in Defense

The IWI 40mm stand alone Grenade Launcher is a single shot 40X46mm grenade launcher specially ergonomically designed. The IWI GL 40 is available in two barrel lengths and compatible with low-velocity and medium velocity rounds.

It is capable to use various lengths of ammunition due to its side opening barrel and has been developed in collaboration with the Israel Defense Forces (IDF).

It is a rugged weapon, cost-effective, reliable, safe, easy to maintain and simple to operate.

ADVANTAGES AND BENEFITS:

- Forward and side opening barrel system.
- The forward movement allows a simple extract and injection of the grenade and the side opening enables the use of long grenades
- Includes safety mechanisms
- Rapid assembly and disassembly of the weapon by user level without any additional tool.
- Enhanced user ergonomics.

FEATURES:

- Upper and lower picatinny rails attached to the lower picattiny rail of the rifle.
- Designed also for reinforced ammunition (Medium Velocity) for longer ranges than usual.
- Compact - foldable butt stock.

NEGEV LMG

Your Partner in Defense

The NEGEV LMG is the lightest and only light machine gun with semi automatic mode in the world, developed by the IDF.

The NEGEV (5.56X45mm and 7.62X51mm) is a robust and reliable assault Light Machine Gun with powerful target acquisition and accurate performance in the modern battlefield. Its semi-automatic feature empowers its use in Close Quarter Battle (CQB) operations safely. The NEGEV LMG is a lightweight, advanced machine gun deployed by the Israel Defense Forces (IDF), and battle proven around the world under adverse and extreme environmental conditions.

NEGEV LMG 5.56X45 mm
