CAPTURE
precise tracking at its best

CAPTURE SYSTEMS LTD.

CAPTURE Systems specializes in the design, development and production of advanced modular multi-axial pedestals, creating flexible solutions for industrial, civilian, air, land and naval applications in the civilian, security and military markets.

CAPTURE pedestals can be modified to fit a wide range of clients' needs, including: surveillance systems, satellites, communication antennas and measurementand motion systems.

CAPTURE incorporates divisions in all required fields of design, production and maintenance: Mechanical engineering, programming & control engineering, production & QA testing and service specialists, All divisions comply with the highest standards of excellence, employing extensively experienced experts.
CAPTURE Systems is committed to maintaining the quality of the systems we develop and create without compromise, and to surpass the harshest quality standards in the field including MIL STD and ISO 9001.
The motion control systems are characterized, among other attributes, by maximized precision, propulsion control, location, speed, stabilization and by the intense weight they can carry, compared to torque.
The weight ranges between 800 grams to 500 kilograms. The knowledge, design, engineering capabilities and its reputation- all place Capture Systems as the top Israeli engineering company in the field of precise motion control systems.
