

SAFESHOOT LTD.

SafeShoot was founded by a group of seasoned military and professional entrepreneurs that decided to devote themselves to finding a solution to friendly fire accidents. Utilizing their skills in technology development and management, along with their rich military background, the founders developed SafeShoot – a breakthrough solution for identifying friendly forces, regardless of direct view.

The Company operates both in Israel and in North America in order to expand its marketing activities and interaction with end users.

SafeShoot has currently identified 4 market segments that have a critical need for preventing friendly fire:

- Military (combat operations and trainings)
- Law Enforcement Agencies (including police forces, SWAT, first responders, firefighters)
- Homeland Security
- Hunting

SafeShoot provides a comprehensive solution that offers greater freedom of operation and cooperation between forces, while preventing friendly-fire incidents without altering the behavior of firearm users. The technology may be adapted for use for each relevant market sector according to specific missions and requirements.

For military use, SafeShoot may be tailored to prevent friendly fire within individual military forces, as well as between inter-disciplinary and allied forces, including infantry and tanks.

At later stages, the system will be adapted to aircraft and indirect weapons.

SafeShoot has been granted patents on its technology from the US, Canada and Israel. EPO application is pending.
